

INFOCUS DESKTOP HIGHLIGHTS

- By integrating all functionality in a single tool, InFocus is the easiest way to achieve compliance.
- Accessibility previews offer the quickest approach for testing design-level issues.
- Powerful Autofix capability enables automated correction of errors on multiple pages at once.
- Complete testing and fixing capabilities for all accessibility standards, including Section 508 and W3C WCAG.

SELECT CUSTOMERS

InFocus Desktop is used by several organizations including:

- Hewlett-Packard
- SAP
- Wells Fargo Bank
- BMC Software
- Department of Defense
- Social Security Administration

THE INFOCUS SUITE

The InFocus Suite is an integrated solution for implementing and monitoring accessibility enhancements for Web sites and Web applications. The InFocus Suite is comprised of InFocus Enterprise and InFocus Desktop. InFocus Enterprise provides business users with information on the ongoing compliance of their Web sites, enabling them to assess accessibility risk and plan accessibility initiatives. InFocus Desktop provides Web developers and QA engineers an automated way to implement compliance enhancements, saving time and reducing implementation errors.

INFOCUS DESKTOP

InFocus™ Desktop, part of the InFocus Suite, automates the process of finding and fixing accessibility violations in Web sites and Web applications, saving up to 90% of the cost and time required to implement accessibility. InFocus Desktop was the first commercial Web accessibility software and remains the market leader. With over 115 accessibility tests encompassing all major accessibility standards and the highest level of automation available, InFocus Desktop is the most complete and accurate solution on the market. Designed specifically for Web developers and QA engineers, InFocus is the best way to integrate accessibility into your organization's development process.

WHERE DOES INFOCUS DESKTOP FIT IN THE PROCESS?

InFocus Desktop is perfect for developers during the Address phase of SSB's Assess, Address, Assure accessibility solution. After performing an Initial Assessment and developing a Project Plan during the Assess phase, InFocus enables developers and QA engineers with limited accessibility knowledge to quickly implement the required accessibility enhancements. After achieving accessibility, InFocus can be integrated into your organization's ongoing development processes, ensuring the accessibility of new content and eliminating costly remediation activities during the Assure phase.

WHO USES INFOCUS DESKTOP?

InFocus Desktop was designed for anyone who creates or tests Web content. This includes Webmasters, Web developers, Web application programmers, and Quality Assurance engineers.

INFOCUS DESKTOP FEATURES

Automated testing

Automates the process of testing for accessibility violations, enabling your organization to get accurate results quickly.

Automated fixing

Streamlines the retrofitting process, allowing your organization to achieve accessibility efficiently.

Custom rules builder

Allows configuration of InFocus Desktop to test for the standards that matter most to your organization - Section 508, World Wide Web Consortium Web Content Accessibility Guidelines or your own set of usability requirements.

Ease-of-use

Simplifies the fixing process by providing powerful tools to facilitate remediation.

Preview modes

Special accessibility preview modes simulate end-user testing, increasing your organization's overall accessibility.

Just-in-time learning

Explains accessibility violations and how to fix them, quickly making developers knowledgeable about accessibility.

Reporting

Creates reports in multiple formats, allowing your organization to fully document its compliance efforts and reduce its liabilities.

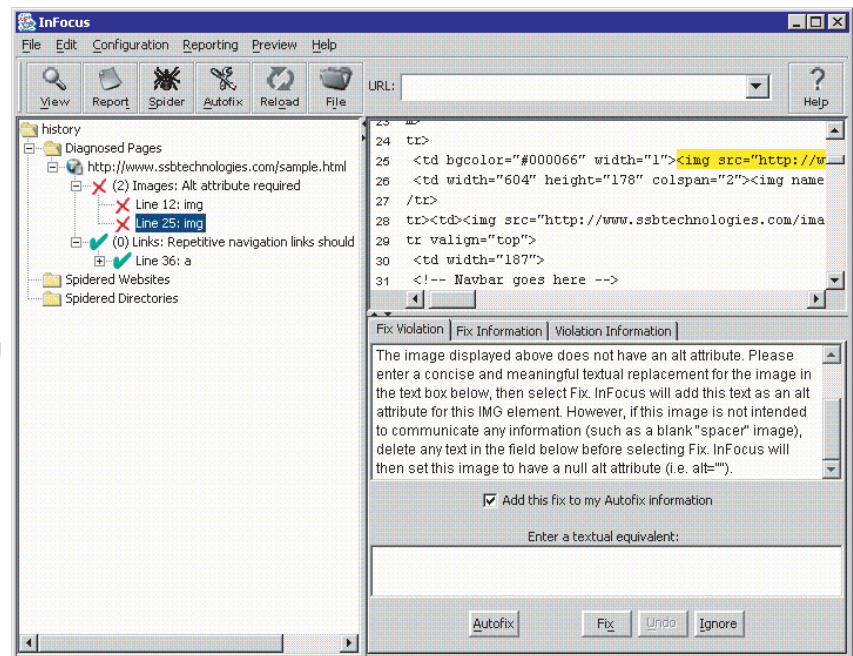

Integration with enterprise software

Maximizes investments in InFocus Enterprise, Web development, and content management software by integrating InFocus Desktop's reliable accessibility testing and fixing functionality with your organization's overall Web management procedures.

SSB TECHNOLOGIES

SSB Technologies provides solutions that resolve the revenue loss, punitive damages, and compliance risks created by inaccessible Information Technology (IT) systems, including Web sites, Web applications, software, and hardware. SSB's proven Assess, Address, Assure™ solution integrates the business and technical requirements necessary to transform accessibility from a liability into a competitive advantage. With over 400 public and private sector customers, 600 successfully completed projects, and award-winning software, SSB has the experience and expertise to ensure that your organization reaches its accessibility goals.
